# NEXT100: The Beginning of a Journey

Congratulations to the winners. You will, of course, achieve a lot more. In fact, that is a natural expectation from you from now on.

**Shyamanuja Das**

I first realized the value of NEXT100 when, as a researcher, it popped up as one of the five top enterprise technology media brands in a research project for a personal technology company that was trying to enter the enterprise technology space. I, of course, knew about it, as many of my friends were working for it. But I had never realized its impact. This was in 2012, less than two years after it started. On the contrary, all other brands were at least one and a half decades old. I myself was associated with two of them earlier. In short, NEXT100 had excited the community early on.

"NEXT100 is the recognition that actually helped the world notice me. Suddenly, I was considered an important community member," a CIO told me. He won in the award's early years. That way, it's the beginning of a journey. If NEXT100 is the beginning, the ultimate is the CO&LEADER Samman, given to veteran CIOs not just for their professional achievement but also for their contribution to the community.

That NEXT100 is the right beginning is best illustrated by the journey of a NEXT100 winner. Take the case of Deepak Agarwal. A winner of the first batch of NEXT100 awards in 2010, he superannuated as Executive Director at Indian Oil. He contributed his bit by becoming a member of the jury of NEXT100. His achievements and contributions brought him the CIO&LEADER Samman. After retirement, he is still contributing to the community as a Samman jury member.

Congratulations to the winners. You will, of course, achieve a lot more. In fact, that is a natural expectation from you from now on. ■

# Top 9 Measures to Future-Proof Your Data Centre Infrastructure

In the digital age, industries are evolving quickly, and the cornerstone of every organization's technological endeavours remains the data centre. As enterprises dive deeper into cloud technology, digital services, Artificial Intelligence (AI), and the Internet of Things (IoT), there's an escalating demand for data centres to be agile, adaptive, and efficient. These demands aren't just about the present; they're about crafting a vision for the future and ensuring businesses remain ahead of the curve.

Here's a comprehensive guide on the steps CIO/CTOs can take to ensure their data centre infrastructure remains resilient and relevant in the years to come:

## 1 Hybrid Infrastructure

The dynamics of modern business require both third-party colocation and cloud infrastructure. A hybrid approach is not merely a trend but a necessity. It allows businesses to evolve according to their needs without mandating extensive infrastructural changes.

## 2 Modular Design

Just as businesses evolve, so should their data centres. A modular layout ensures that its data centre can be easily augmented or modified as a company expands, providing scalability without the need for all-encompassing redesigns.

### 3 Energy Efficiency

Beyond corporate responsibility and the global call for sustainable practices, energy efficiency directly correlates with reduced operational expenses. Leveraging energy-efficient hardware, alongside innovative cooling techniques, helps the planet and the bottom line. Traditional data centres frequently miss out on energy monitoring features. Tech leaders need to evaluate the energy performance of these data centres and determine which solutions offer long-term cost benefits.

### 4 Security Focus

In the ever-evolving landscape of cyber threats, it is imperative to prioritize security when making infrastructure decisions. To safeguard your digital assets, implementing a multi-faceted security strategy is essential. This strategy encompasses a spectrum of measures, ranging from firewalls and intrusion detection systems to encryption and routine security assessments. Furthermore, equipping your staff with proper security training and best practices is crucial for risk mitigation.

Within data centre operations, data security and resiliency hold paramount importance. To ensure the safety and integrity of your digital infrastructure, it is advisable to seek out data centres that consistently invest in state-of-the-art physical security systems and maintain stringent access controls. In the digital space, robust defenses include network firewalls, intrusion detection systems, and advanced data encryption methods. Comprehensive disaster recovery procedures should also be in place, such as redundant systems and regular data backups.

Regularly conducting vulnerability assessments and audits is a proactive approach that enables businesses to identify and address potential issues promptly. By adopting these comprehensive security measures, you can achieve the highest level of data security, which is of utmost importance in today's technology landscape.

### 5 Embracing Edge Computing

In our connected world, where billions of devices constantly communicate, edge computing plays a pivotal role. Processing data closer to the source drastically curtails latency and optimizes bandwidth, ensuring real-time and effective data handling.

### 6 Software-Defined Flexibility

Software-Defined Infrastructure (SDI) is redefining how businesses perceive their data centres. By segregating hardware from software, SDI facilitates swift adaptability to market changes without an overwhelming dependence on hardware modifications.

### 7 Disaster Preparedness

The unpredictable nature of disasters, be it a cyber onslaught or a natural calamity, necessitates a holistic disaster management strategy. This encompasses regular data backups, robust recovery protocols, and rehearsed response strategies to minimize downtime and data loss.

### 8 Skills and Training

No data centre can outperform its operators. The IT team must have the latest knowledge and expertise as the technological landscape transforms. Proactive training and skill augmentation are quintessential to harnessing the full potential of new technical solutions.

### 9 Staying Updated

Complacency is the antithesis of progress. It's incumbent upon CIO/CTOs to remain abreast of emerging technological paradigms and shifts that can mould the future of data centre operations, ensuring that their strategies are not just relevant but pioneering.

## Conclusion

CapitaLand Data Centre a global industry leader, provides CIO/CTOs with a comprehensive suite of solutions to future-proof data centre infrastructure. With a track record of excellence, they offer expert guidance, cutting-edge technology, and scalable, modular designs. Their strategic locations reduce data processing latency, while a commitment to sustainability aligns with global environmental goals. Robust security measures protect critical data, and ongoing support ensures IT teams stay updated, maximizing the potential of data centre solutions.

In the ever-evolving landscape of technology, CIOs need a partner who not only understands their challenges but also has the capabilities to address them comprehensively. CapitaLand Data Centres' value proposition and USPs make them the ideal partner for CIOs looking to future-proof their data centre infrastructure. Together, IT decision-makers and CapitaLand Data Centres can forge a path to technological excellence, innovation, and long-term success. With CapitaLand by their side, CIO/CTOs can confidently navigate the digital future. ■

- Evaluation & Selection
- Application Development & Deployment
- Vendor Management

## Methodology

The selection process for NEXT100 2023 commenced in March 2023 with a call for applications. The entire IT manager community was informed through a series of e-mails, print advertisements, and the social media. By June 2023, when the applications closed, there were 596 applicants who had registered for the process.

The selection of the award winners was done through a three-stage process, as in the past years. In the first stage, all award aspirants had to complete a detailed application form—and provide detailed personal and professional information, including education, technical skills, and work experience. They also had to nominate referees who could support their application for consideration for the award.

In the second stage, applicants took two psychometric tests: Personality Profile test and Emotional Quotient test. The tests were administered online by Paris-based Central Test International. Every applicant who completed all the tests received a free, personalized copy of the assessment reports for reference and self-development.

The NEXT100 jury members approved a set of criteria (including education, length and quality of work experience) to prepare a ranked shortlist of candidates for the interview stage. Every

shortlisted candidate was independently interviewed by two NEXT100 jury members.

Separately, independent recommendations were obtained by the IT NEXT team for each candidate, from the nominated referees, including current supervisors.

The scores and evaluations assigned to all candidates in every stage of the selection process were input into a proprietary scoring model that assigns carefully calibrated weights to various factors. The final list of NEXT100 award recipients, listed in this book,

is an outcome of this scoring model.

To ensure that the NEXT100 awards are completely fair and unbiased, no member of the IT NEXT editorial team was involved in the selection or elimination of the award winners, nor are editors and staff of IT NEXT magazine a part of the jury panel.

As in past years, the NEXT100 awards program draws on the knowledge and support of the CIO community.

Forty-one senior executives who comprise the jury of the NEXT100 awards, collectively representing many decades of experience in IT and corporate management, were involved as advisors, interviewers and selectors this year.

The jury panel debated, deliberated, and decided on the award winner selection process—and conducted detailed interviews of shortlisted applicants. The jury also approved the final list of award winners.

## Psychometric Tests

All applicants for the NEXT100 awards take two psychometric evaluations—a personality test and an emotional quotient test. These tests are administered by Paris-based Central Test. The results of the tests are factored into the total evaluation of the candidate. All candidates who take the evaluations receive detailed personalized reports that can be used for self-development.

The Central Test Personality Inventory for Professionals (CTPI-R) test provides an assessment of work-related personality traits that play a crucial role in performance. According to the test designers, CTPI-R conforms to the standards of scientific validation set out by the International Test Commission, and the American Psychological Association.

The workplace competencies are defined as “clusters of knowledge, skills and attitudes that are predictive of superior performance in a given job.”

According to Central Test, the competency scores in the CTPI-R are not a ‘direct assessment’ of competencies but an ‘assessment of proximity’ of the test taker to the profile of others who have demonstrated a high level of that specific competency.

The assumption behind this method of evaluation is that people with similar profiles will be more likely to exhibit similar abilities. As the scores are derived from an assessment of proximity to an ideal profile, they give an indication of

the extent to which the candidate is psychologically inclined towards high performance on a specific competency. The score on each dimension of competency also provides an indication of the extent to which the person is trainable on each competency.

The Emotional Quotient test, introduced for the first time in 2018, assesses the ability to perceive, understand and manage one’s own emotions and those of others. This is an essential leadership requirement in modern times.

The test measures four dimensions – intra-personal intelligence, personal development, self-assertion, and leadership. The participants are measured across 12 parameters: Adaptability, self-knowledge, self-motivation, self-control, assertiveness, self-confidence, inter-personal skills, self-esteem, optimism, resilience, mediation & influence, empathy & lucidity.

# Workplace Competencies

According to Central Test, the CTPI-R test has been standardized on an international group of 5,000+ working managerial professionals. The test uses a continuous scale of 0 to 100 to deduce 24 competencies that are relevant in the workplace. The conclusions are based on statistical studies and theoretical models. The overall analysis of workplace competencies reveals that there is not a

significant difference between NEXT100 winners and other applicants in workplace competences. The NEXT100 winner cohort was overall low on quality orientation and sense of duty, with other applicants faring slightly better on the same competencies. However, on the team cohesion dimension the NEXT100 winner cohort exhibited a relatively superior score.

- Sympathy: Effectively identifying and understanding the needs of another person.
- Perspective Taking: Taking a step back to analyze facts and situations objectively before acting or deciding.
- Stress Management: Managing one's own emotions and remaining calm and productive in challenging situations.
- Delegation: Assigning tasks and responsibilities appropriately, according to individual abilities and needs.
- Performance Management: Monitoring, managing and evaluating employees' performance in order to maintain standards and targets.
- Decision Making: Making the best possible choice based on the information available, as well as being able to explain these decisions.
- Conflict Resolution: Maintaining harmony within the team by mediating conflicts.
- Mentoring: Taking responsibility for employees' development and progression by coaching them to help them improve.
- Team Cohesion: Encouraging activities that will enable united and productive teams.
- Innovation/Creativity: Thinking outside the box and looking at things from new perspectives.
- Networking: Making contacts and developing a network of influential people for potential opportunities.
- Managerial Courage: Speaking confidently and setting limits when the situation demands it.

# Personality Profile

The CTPI-R test provides an assessment of work-related personality traits that play a crucial role in performance. The test measures work personality across 19 dimensions. These dimensions are organized into four groups: People Management, Perception Mode, Self Management and Change Management.

The test results are reported on a scale of 0 to 10, with 0 implying a low level and 10 implying a high level of conformance to the behavioural characteristic. Both NEXT100 winners and other applicants exhibit a high experimental personality trait, and low tendency towards control and conscientiousness. While NEXT100 winners exhibit a little higher level of trust, on the self-management front, both groups show high level of optimism and self-confidence.

- Persistence: Demonstrating determination and maintaining a high level of energy in the performance of duties.
- Initiative: Seizing opportunities and being a driving force to create or move things forward.
- Strategic Planning: Establishing action plans to anticipate future developments.
- Team Motivation: Leading a group of people towards a common objective by winning their support and pushing them to surpass themselves.
- Promoting Change: Communicating a new vision in an engaging and inspirational manner to encourage involvement.
- Adaptation to Change: Being able to adapt to change, adjusting one's behavior or attitude to an environment and people.
- Availability: Being committed to the organization and being willing to help others whenever possible.
- Identification of Opportunities: Understanding the market perfectly in order to be able to identify and seize business opportunities.
- Influencing Skills: Promoting ideas and convincing others, as well as, communicating in an assertive and tactical manner.
- Sense of Duty: Respecting and adhering to codes of conduct, remaining honest, and being reliable.
- Striving: Constantly seeking to excel and surpass one's goals.
- Quality Orientation: To be meticulous with an eye for detail to ensure the highest level of quality and service.

# Emotional Skills

The Emotional Quotient test assesses the ability to perceive, understand and manage one's own emotions and those of others. The participants are measured across 12 parameters: Adaptability, self-knowledge, self-motivation, self-control, assertiveness, self-confidence, inter-personal skills, self-esteem, optimism, resilience, mediation & influence, empathy & lucidity.

NEXT100 winners show an overall higher level of resilience and self-regard, and there are marked differences in the levels of expressing emotion, optimism and mediation when compared to other applicants. The other applicants also score low on empathy and tactfulness.

# Leadership Suitability Fit

Leadership Suitability Fit evaluates applicants on five dimensions—adaptability, leadership, personal development, self-assertion and self-awareness. While the NEXT100 winners did better than other applicants across all dimensions, there was a pronounced difference on the adaptability, leadership and personal development factors.

## Self Knowledge

Being self-aware means being able to identify what emotions are being felt and what sets them off; it means listening to one's own desires, needs and motivations. People who are self-aware know how to analyze their own reactions and behavior.

## Self Motivation

This trait determines the ability to find the resources within oneself in order to become and remain motivated. People who have this drive will adopt a positive attitude in any situation and will show perseverance and tenacity.

## Self Esteem

Self-esteem corresponds to how much one values oneself. By recognizing their own strengths and weaknesses, people understand what they are worth and they are not dependent on what others think; they thrive more easily.

## Resilience

Resilience is the ability to get back on one's feet after disappointment or failure. By learning from mistakes, people are better able to cope with failure and struggle. High resilience allows people to move forward and not be burdened with regret.

## Self Control

Self-control is an important asset for becoming socially accepted. This refers to the ability to control impulses and excessive reactions such as anger, exasperation, anxiety or melancholy—so that people can think and act calmly in any type of context. People who demonstrate good self-control give an impression of stability.

## Adaptability

They can cope with difficult situations such as conflict or stress without revealing their feelings and they are able to ease tension. Adaptability is an essential characteristic for building good social and occupational relationships and fitting in an environment.

## Optimism

Being able to adapt means being able to let go of habits and to easily change points of reference. Adaptable people are able to share opinions and feelings, while taking specific situations and points of view into account. Optimism is one facet of emotional intelligence and also a result of emotional intelligence: feeling good about oneself and one's

## Self Confidence

relationships leads to more confidence in the future. Being optimistic means being generally happy with life, seeing the positive side of things and thinking that the best is yet to come. Being self-confident is, above all, having a strong belief in oneself and in one's abilities. Self-confidence can manifest itself in personal skills allowing us to surpass our own objectives and gain autonomy. It also enables us to tackle challenges and unexpected events more serenely.

## Empathy and Lucidity

Empathy is about putting oneself in another person's shoes and understanding what is on his or her mind, all while staying true to oneself. Being similar to clear-sightedness, empathy helps a person understand the big picture and read between the lines, in terms of psychology (such as figuring out the unspoken goal of someone trying to sound convincing) or facts.

## Assertiveness

Being assertive is the ability to express oneself and make one's voice heard without being uselessly aggressive. Assertive people can find their place more easily in a group and share opinions and feelings more effectively. When a situation calls for confrontation, an assertive person will not turn away. This is why being excessively assertive can be seen as being arrogant.

## Mediation and Influence

This trait evaluates the ability to develop arguments, motivate others and inspires enthusiasm, thanks to a good understanding of who people are and how they react. Mediation and influence also refer to an ability to reconcile diverging points of view in situations of conflict.

## Interpersonal Skills

Having good interpersonal skills means being good at forming and maintaining relationships with others. Being authentic is a must! People who have good relationship skills can easily share their emotions and feelings and they feel comfortable in groups and communicate without difficulty.

# NEXT100 AWARDS 2023

## A Closer Look at the IT Leader of Tomorrow

**T**he 14th edition of the NEXT100 awards, hosted by the 9.9 Group, once again highlighted the latent potential of IT Heads and senior IT managers to be future CIOs of India. A distinguished panel of experienced CIOs from India's top organizations identified 100 IT professionals as NEXT100 winners through a series of detailed evaluations.

The selection process, demographics, and preferences of these winners provide interesting insights, offering a glimpse not only into the awardees themselves but also into the dynamic and evolving landscape of IT leadership in India.

### Selection Process and Participation

The awards application process garnered immense interest, with 1,037 IT managers registering this year. However, only a quarter of these (251 to be exact) moved on to the psychometric testing phase. The selection of the final award winners wasn't solely based on documentation; the aspirants had to impress a panel of 41 senior CIOs who, as jury members, undertook the daunting task of interviewing and selecting the winners.

### Demographic Insights

The geographical distribution of the ap-

plicants and winners paints an interesting picture. Greater Mumbai region led the charge with 30% of applicants, followed by Delhi NCR (24%) and Bengaluru (12%). Interestingly, despite having fewer applicants than Greater Mumbai, Delhi NCR dominated the winner's circle with 30% representation, leaving Mumbai and Bengaluru with 17% each.

Work experience seems to be a key factor among the NEXT100 winners. A striking 30% have between 21 to 25 years in the industry, while another 29% have between 16 to 20 years of experience. This showcases the blend of seasoned insights and adaptability that these leaders bring to the table.

In terms of gender distribution, male representation was predominant with 92% of the winners, whereas female representation stood at 8%. While this data sheds light on the current gender dynamics in IT leadership, it's a reminder of the scope and need for enhanced diversity in the field.

### Academic and Professional Highlights

The majority of the winners held Bachelor's degrees in domains like Engineering & Technology, Computer Science, Computer Applications, and Electronics. Their business and

management acumen was evident in their expertise, which spanned areas such as Project & Program Management, Operations Management, Vendor Management, Budgeting & Financial Management, and Customer Support & Service Management.

### Beyond the Resume

Looking beyond their professional achievements, the personal interests of the winners provide a more holistic view of their personalities. Travel and music topped the list, followed by cooking, cricket, reading books, and photography. Their movie preference reflected their aspirational nature, with "The Pursuit of Happyness" being a favorite. When it came to unwinding, Switzerland emerged as the most admired vacation spot. A touching revelation was that 25% of the winners cited their parents as their greatest source of admiration.

### Conclusion

The NEXT100 awards, which is supported by India's CIO community, continues to celebrate IT leadership—and holds out the promise of a dynamic future for the industry. The combination of experience, expertise, and passion seen in this year's winners indicates that the future of IT in India is in capable hands. ■

(Times Group) ● **Archit Rajesh**, General Manager - IT & Group CISO, TeamLease Services ● **Geetika Rajpal**, Head - IT, AB Mauri India ● **Nitin Ramchaware**, Vice President & Head - QA, CRIF India ● **Chetan Rana**, Program Manager II, Microsoft IDC ● **Rajappa Rathinasabapathi**, Chief General Manager - IS, Hindustan Petroleum Corporation Limited ● **Sivananda Reddy**, Vice President, ANZ Support Services India ● **Sameer Relan**, Senior Manager & India Leader, Rackspace ● **Reema Sahasrabudhhe**, Associate Vice President, Aditya Birla Capital ● **Datchanamoorthy Segar**, Deputy General Manager, Ashok Leyland ● **Neha Shah**, Head - Digital Assets, SBI General Insurance ● **Nayan Shah**, Head - IT, Bank of Bahrain & Kuwait BSC ● **Akash Shastri**, Senior Program Manager, Hippostores Technology ● **Prateek Shirod**, Head - IT, CEAT ● **Ankur Shree**, Principal Enterprise Architect GlaxoSmithKline ● **Shantanu Singh**, Deputy Manager, BHEL ● **Sukhdev Singh**, AGM - ICT & ISA Services, LeasePlan India ● **Devesh Singh**, Manager - IT, Dabur India ● **Bal Singh**, Vice President - IT, Shahi Exports ● **A N Srinivasan**, Vice President - IT, SRF ● **Niraj Srivastava**, Senior Manager - IT, Blink Commerce ● **Vikas Srivastava**, Head - Office of Enterprise Architecture, Mahindra & Mahindra ● **P Sureshkumar**, Assistant General Manager - IT, Pernod Ricard ● **Keyur Thakkar**, Head - IT & Systems, Best Value Chem ● **Chenchuramaiah Thandra**, Senior Manager - ITS, TVS Mobility ● **Nikesh Tripathi**, Assistant Vice President - IT & Digital, Axis Asset Management Company ● **Rupesh Vaish**, Assistant General Manager - IT, Dwarikesh Sugar Industries ● **Nilesh Velankar**, Head Cloud Delivery, Tata Consultancy Services ● **Shankar Venkatesan**, Head - IT, Avalon Technologies ● **Naresh Yadav**, General Manager - IT, Sunbeam Lightweighting Solutions.

# THE IT LEADERS OF TOMORROW

Wishing You  
All the Best  
for the Future

# WINNER SPEAK

I feel privileged and honored to win this prestigious NEXT100 award, which has added great value to my life personally and professionally. Be it my office colleagues, management family, or friends, everyone is feeling pride and showering their praises and blessings for this achievement.

I would like to thank ITNext and 9.9 Group for honoring me with the NEXT100 2023 Award and identifying me as one of India's future CIOs."

**BHABANI CHATTERJEE**  
Engagement Leader, Capgemini

Securing the Next100 award would be a pivotal milestone, profoundly impacting my professional and personal spheres. Professionally, it would validate years of unwavering commitment and hard work, significantly enhancing my industry visibility and unlocking exciting avenues for collaboration and advancement. This accolade would fortify my credibility, empowering me to effect meaningful change within my field. On a personal note, the award would instill an overwhelming sense of pride and motivation, serving as a driving force to continually surpass boundaries and set new benchmarks. Its inspirational effect could also catalyze others to pursue their ambitions, fostering positive growth in my personal and professional circles. Undoubtedly, this achievement would shape my future endeavors, nurturing success and personal fulfillment in equal measure."

**VIRAJ DUDHWALA**  
Head - IT, Adani Hazira Port

“It's been a wonderful journey winning the NEXT 100 2023 award, starting by going through the Psychometric tests and knowing about our personality and behavior skills as a leader, which shows a true reflection of knowing yourself and providing an opportunity to improve.

After that, you go through the selection process of two separate interviews with prominent senior leaders from the Industry. Passing these interviews will help you feel more confident about playing the CIO role soon.

On the big day of receiving the award, it was such an experience meeting industry veterans and leaders, learning from their experiences, getting to know more people, and making new friends, all in all it was a great journey throughout.

The entire process took approximately 5-6 months end to end, and it has been a really well-coordinated, managed, and thoughtful journey. All thanks to the organizers and team for making this event a huge success. Wish them many more successful events like this in the future.”

### RAMAN GOEL

Enterprise Architect, IBM India

“NEXT100 award is the acknowledgment of the experience and job well done. This award gave me validation and a boost to my confidence. I have changed as a professional dealing with people and processes.

I have received an overwhelming response from my peers and friends via various channels. On LinkedIn itself, I received 100+ comments and 250+ acknowledgments from the industry fraternity.”

### STEPHEN GEORGE

Vice President, HSBC Software Development India

“Winning the award holds immense significance for me in both my professional as well as personal life. Professionally, it enhances my reputation and credibility within the field, indicating that both experts and peers recognize and value my work. Secondly, the award's prestige captures the attention of potential employers, clients, and collaborators, opening up new and exciting work opportunities and potential partnerships that were previously less accessible. Furthermore, as an award recipient, participation in events, ceremonies, and conferences becomes more frequent, providing a valuable chance to connect with fellow industry professionals. This networking potential not only fosters meaningful connections but also facilitates possible collaborations, all while keeping me informed about industry trends. On a personal level, winning this award provides a deep sense of accomplishment and motivation, thereby not only encouraging me to push my boundaries but also inspiring others to pursue excellence as well. This positive impact extends beyond my immediate circle, nurturing a culture of continuous growth and ambition.

Following the receipt of the esteemed award, I have been deeply touched by the considerable positive feedback and reactions that have poured in from my colleagues and peers. Their congratulatory messages have been both heartening and affirming, further fortifying my dedication to advancing the boundaries within my field. This recognition has further sparked meaningful discussions and teamwork, inspiring us to strive for even greater achievements together.”

### KAPIL MEHTA

Senior Director - IT, Visionet Systems

# A Glimpse Into The Future Of AI

AI Scientist Prof. Toby Walsh highlights that AI is on the verge of becoming a trusted conversational companion, whether in the workplace or personal space

By Nisha Sharma

Imagine a future where your gadgets understand you like a close friend. Professor Toby Walsh, Chief Scientist at the University of New South Wales AI Institute, predicts that this is the path AI is heading. In a candid conversation with CIO&Leader at their Annual Conference, he shared how AI is not merely a tool but the driving force that will elevate our tech-

nology into something extraordinary. It's not just about cutting-edge tech; it's poised to boost the economy by a remarkable 15-20%!

One of the significant challenges for generative AI is its struggle to replicate the human touch or empathy. This essence truly differentiates human-to-human interactions from machine-to-human engagements. While this

challenge remains, it is also seen as an untapped potential.

Prof. Walsh, who is known for his work in areas such as automated reasoning, AI ethics, multi-agent systems, and AI for social good, envisions a future where AI models will have cognitive empathy, offering rich, continuous learning interactions similar to human experiences.

This transformation will not only enhance conversational intelligence but also enable AI and Generative AI to comprehend us similarly to a human friend, not only solving complex problems but understanding us at a personal level.

### **Making tech accessible to all**

Professor Walsh emphasized that AI is well on its way to becoming our primary mode of interaction with technology, giving it an almost 'personality.' Drawing a parallel between this AI democratization and the rapid rise of instant conversational search technologies like ChatGPT, he emphasized how they enable individuals and organizations to shape the direction of tech.

Looking beyond today's AI models, the author of 2062: The World that AI Made likened this revolution to the era when personal computers and innovative apps like VisiCalc emerged. He encouraged the industry to think beyond the obvious and explore new, amazing applications for AI that we've yet to uncover.

### **Data makes all the difference**

Amidst this AI evolution, data emerged as the lifeblood of AI. It's what makes

**Drawing parallels with the democratization of AI, Toby cited the rapid dissemination of technologies like ChatGPT, enabling billions to influence the technology's trajectory through their creativity and innovation.**

AI models successful. Large news organizations like Bloomberg and Reuters thrive on it, leveraging data to develop incredibly specialized AI models, showcasing the critical role of data in driving AI technologies.

### **A balancing act for a better tomorrow**

While AI holds immense potential, Professor Walsh cautioned against overestimating its current capabilities. He highlighted the need for continuous research to ensure AI truly understands and reasons like a human. Responsible AI use and addressing biases in AI models are critical challenges that we must address for a brighter AI-powered future.

Professor Walsh urged the industry to collectively steer AI towards a brighter future that benefits us all. He stressed the importance of embracing the evolving AI landscape with wisdom, foresight, and a strong ethical compass. Enterprise and their leaders are worried about keeping their data safe when they use AI tools like Bard and ChatGPT. They need to plan and test really well to use AI the right way. The potential of AI is undoubtedly promising, provided we leverage this technological revolution in the right direction.

To overcome these challenges, business and technology leaders must construct an AI roadmap to understand how this technology will help their unique business goals. ■

## **KEY TAKEAWAYS FROM OUR EXCLUSIVE INTERACTION**

### **India's AI dominance: Data-driven potential**

India stands poised at the AI frontier. With its unparalleled population offering a treasure trove of data, the nation could spearhead AI's next revolution. But it's not just about quantity; it's about quality. Renowned universities, coupled with AI-savvy leadership, set the stage for India's AI ascendancy.

### **Predictable vs. Unforeseen impacts**

AI's trajectory is rife with contradictions. On one hand, we see the obvious: the dawn of self-driving cars heralds a driverless future.

Yet, the ripples are unpredictable. Could autonomous vehicles redefine urban living or render parking lots obsolete? And with AI tools like Chat GPT scaling

to a billion users in record time, the pace of change is both exhilarating and daunting.

### **Ethics in AI**

AI is a tool, and like any tool, it can build or destroy. The onus is on us: Will we champion in technology or lose our way?

### **Machines vs. Man: The future of work**

The AI workforce debate is heating up. While machines boast precision, humans offer emotion, creativity, and adaptability. Consider the coffee conundrum: Machines might brew the perfect cup, but would they remember how you like it or share a morning joke? It seems, at least for now, the human touch remains irreplaceable.
